4. Primates: Chimpanzee / Gorilla

5. Felines: Cat / Lion

6. Amphibians: Frog / Toad

Clue Box

Toad, Cat, Lion, Hyena, Koala, Rat, Frog, Chimpanzee, Squirrel, Kangaroo, Vulture, Gorilla

Migratory Animals

2.

Migration is a process which includes periodic back and forth travel between two widely separated living locations by the organism. Identify and name the following using the Clue Box.

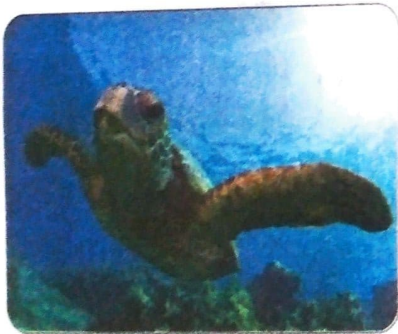

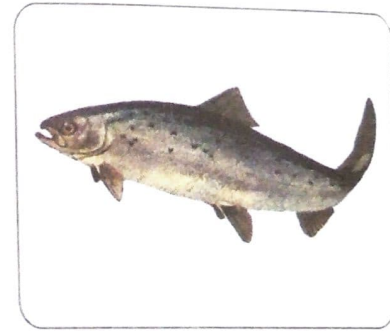

1. It is the champion of all migratory birds. Each autumn, it migrates to the Antarctica from its home Arctic. It flies back to the Arctic in spring. This journey may be over 35,000 kilometres. Arctic Tern

2. It is a mammal which lives near the North Pole. It treks hundreds of kilometres south when food is short in winter.

Reindeer

3. They are born in fresh water streams and travel to the ocean where they mature. They return to spawn in the same fresh water streams where they were born. Salmon

4. It is a reptile and possesses special sensory organs for migration. Scientists have recently discovered a magnetic substance in their heads that act as a compass.

Sea turtle

5. They are the most dangerous migratory insects. Great swarms of them breed especially in the middle east causing immense damage to the crops. Locust Green

Fact-File

Migratory animals have a remarkable power of navigation.
